

FLUSH RADIATOR COVERS

Additional Instructions

This new radiator cover style has been immensely popular, but the official instructions (currently being improved) have not yet caught up. For now, please refer to the below for additional help, or don't hesitate to give us a call during office hours on 01227 833333.

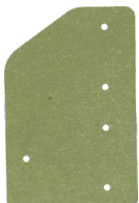

1. SPRING CLIP

Unlike other radiator cover designs, the spring clips (shown in the above diagram in pink) should be attached to the front panel with 16mm PAN Screws. They should point downwards, with the curve extending below the front panel.

2. RECTANGLE PLATES

The 6mm rectangle plates join the radiator cover sides to the side skirting with 16mm PAN Screws.

3. SHAPED PLATES

The 6mm shaped plates join the uprights to the front skirting with 16mm PAN Screws.
